

SIDDHARTH PANDEY

Lead Software Engineer – Full-Stack & AI Systems | Open to Global Remote

+91 88673 41449 pandeyreddharth27@gmail.com [LinkedIn](#) [GitHub](#) [NPM](#) [Dev.to](#) [Medium](#) Bengaluru, India (UTC+5:30)

SUMMARY

Lead Software Engineer with 13+ years building production systems across logistics, fintech, and e-commerce — spanning React and Node.js applications, microfrontend platforms, cloud infrastructure, and AI-powered workflows. Shipped agentic investigation pipelines and RAG-based tooling using OpenAI SDK (TypeScript); architected microfrontend systems that cut deployment coupling across multiple orgs; automated cloud infrastructure with Terraform and AWS CDK. Currently building Infrawise, an open-source MCP-based tool for deterministic infrastructure context in LLM workflows. Engineering lead with a proven track record of scaling teams through hiring, mentoring, and establishing platform standards.

TECHNICAL SKILLS

Languages	TypeScript, JavaScript (ES2022+), HTML5, CSS3
AI & LLM	OpenAI SDK (TypeScript), RAG / Retrieval-Augmented Generation, MCP (Model Context Protocol), Agentic Workflows, Prompt Engineering
Frontend	React, Svelte, Angular, AngularJS, Next.js, Ionic, Cordova, Microfrontend (Single-SPA, Module Federation), PWA, Tailwind CSS, Material UI
Backend	Node.js, Express, Fastify, GraphQL/AppSync, REST, WebSockets, Socket.IO
Cloud & IaC	AWS (CDK, Lambda, CloudFront, S3, AppSync, Amazon Location Services), Terraform, CI/CD, GitHub Actions
Databases	PostgreSQL, MongoDB, Redis, MySQL
Practices	System Design, Technical Leadership, Hiring & Mentoring, A/B Testing, Performance Optimization, Agile/Scrum

EXPERIENCE

Lead Software Engineer

Sep 2022 – Present

HyperTrack Remote | Operational Tracking SaaS Platform (fully serverless — AWS Lambda)

- Architected an Insights Agent platform using OpenAI SDK (TypeScript) on AWS Lambda — orchestrates multiple operational data APIs, maintains account-level context caches, and answers natural language queries about fleet and order operations, reducing mean investigation time for ops and support teams.
- Built a single-order investigation agent that correlates data across multiple APIs, surfaces order state anomalies, and auto-generates the top 3 contextually relevant follow-up questions alongside a custom chat interface.
- Owned frontend architecture for a fully serverless multi-tenant tracking platform; modernized legacy React systems into a modular microfrontend architecture enabling independent team deployments and eliminating cross-team coupling.
- Led infrastructure migration from MapTiler to Amazon Location Services using Terraform, cutting platform mapping costs by ~40% with zero end-user disruption.
- Improved Lighthouse score from ~23 to ~75 via module boundary restructuring; reduced map-heavy page load from ~3s to ~500ms with lightweight Svelte micro-applications.

Associate Technical Architect

Oct 2020 – Aug 2022

Telio Remote | B2B E-Commerce Platform (Vietnam)

- Designed end-to-end microfrontend architecture using Single-SPA across Order Management, Inventory, Promotions, Customer Management, and RBAC domains — enabling independent deployments at scale.
- Led full migration from monolithic Magento frontend to distributed microfrontend ecosystem within ~6 months with zero downtime.
- Built GraphQL/AWS AppSync and Node.js backend services for authentication, authorization, and core operational workflows.
- Established shared component library and design system accelerating multi-team velocity; built multilingual (English/Vietnamese) PWA and Ionic React applications for Southeast Asian markets.
- Scaled frontend engineering from solo execution to distributed team ownership through hiring, onboarding, and structured mentoring.

Software Development Engineer III – Frontend

Apr 2018 – Aug 2020

LendingKart Bangalore | Fintech / SME Lending Platform

- Built internal no-code CMS enabling marketing to publish campaigns without engineering releases; improved Lighthouse scores from ~44 to ~98 and reduced load time from ~6s to ~300ms.
- Increased landing page conversion from ~7% to ~22% through localized, A/B-tested infrastructure supporting 100+ multilingual variants.
- Developed Puppeteer-based HTML-to-PDF pipeline for legal/loan documentation, replacing a manual workflow across thousands of monthly transactions.

Senior Software Developer

May 2016 – Mar 2018

Coviam Technologies Bangalore | Product Engineering Services

- Architected PeopleHum HR platform from greenfield — defined component architecture, real-time notification and auth systems (Node.js, MongoDB, Redis, Socket.IO); maintained Lighthouse scores above 90 across products.
- Managed team of ~5 engineers delivering HR workflows, engagement systems, and enterprise merchant tooling.

Software Development Engineer

Apr 2013 – Apr 2016

CommonFloor | Bangalore | Real Estate Technology Platform

- Built hybrid mobile applications using AngularJS, Ionic, and Cordova for a community engagement platform; contributed to early adoption of hybrid mobile architecture at scale.
- Developed backend-integrated features with MySQL and JavaScript; improved mobile usability and performance during early hybrid-app adoption phase.

PROJECTS

Infrawise Open Source · github.com/Sidd27/infrawise

Deterministic infrastructure context for AI coding assistants via MCP — TypeScript, Node.js, OpenAI SDK, AWS CDK, Terraform

- Provides LLM agents with structured, real-time infrastructure state via Model Context Protocol (MCP), reducing hallucinations in AI-assisted DevOps, incident diagnostics, and deployment workflows.

EDUCATION

Bachelor of Engineering – Information Technology

Aug 2008 – May 2012

Bhilai Institute of Technology, Durg, Chhattisgarh
